

Mikayla Zhang

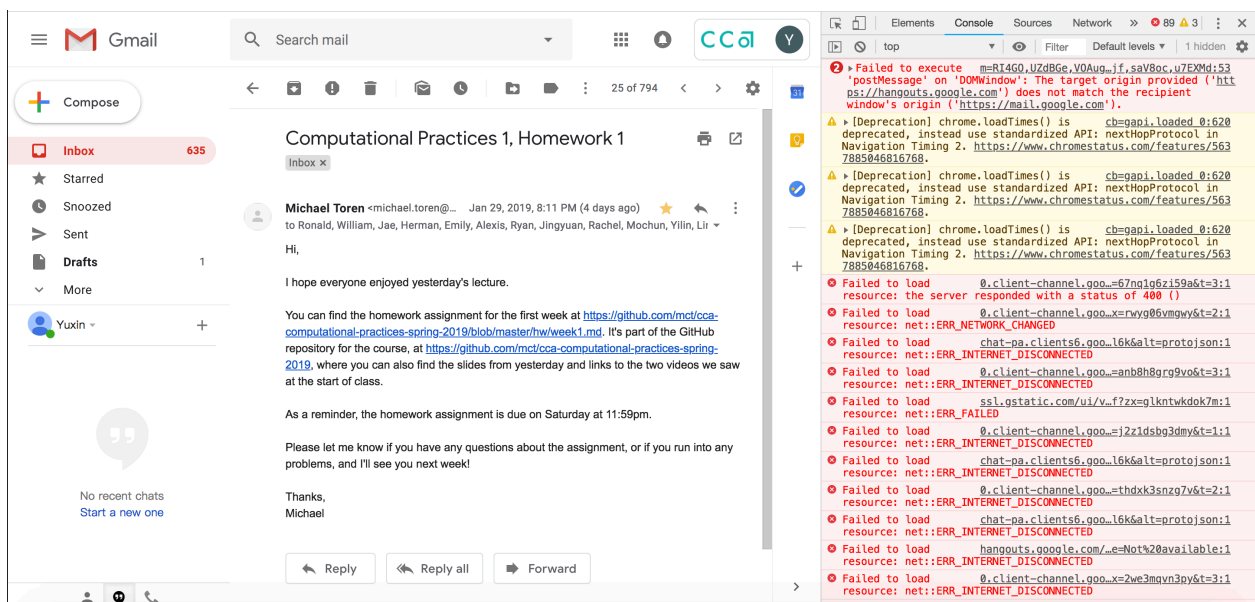

1. What do the numbers inside the parentheses after a function name do?

The numbers are using for decide the x-location, y-location, width and height of the graphic. It helps decide location and shape of the image.

2. What's the difference between `fill` and `stroke`?

Fill describes the interior of the shape; stroke describes the outline of the shape.

3. The p5 web editor has a built-in console — but it turns out that Chrome also has a console to display errors. Do some googling to find out how you can open the Chrome console. Then, try to find a website that has errors — visit a website, open the console, and see if there are any red-highlighted items. Take a screenshot and upload it into your repository.

4. What is the keyboard shortcut to open the JavaScript console in Chrome on your system?

It's Ctrl + Shift + J/ Option + Command + J
